## WATER SMARTER WITH LOCAL WEATHER DATA

*Fair Oaks Water District encourages customers to use evapotranspiration data to water more efficiently and reduce outdoor water waste.*

### What is Evapotranspiration?

Evapotranspiration, also called ET, measures how much water plants and soil lose through heat, sun, wind, and weather. Matching your irrigation to ET means you water only what your landscape actually needs.

### What You Can Do With ET Data

- View daily, monthly, or custom ET reports
- Download data to plan irrigation schedules
- Check temperature, rainfall, & weather conditions

### Why Use ET Data

- Water only when needed
- Adjust irrigation with the seasons
- Reduce runoff and overspray

**Free Access  
to local ET Data  
from station #131, right here  
in Fair Oaks!**

Real time and historical ET data is available through the California Irrigation Management Information System (CIMIS), managed by the California Department of Water Resources.
