

Construction Activity in Your Neighborhood

NEW YORK GROUNDWATER SUPPLY WELL – PHASE II PROJECT

Background

Construction activities will begin again at the Fair Oaks Water District's (FOWD) New York Well Site located at 4301 New York Avenue. The newly drilled well is now going to be equipped with a pump, motor, controls, and all necessary appurtenances to provide potable water. In an effort to minimize noise from the new well during normal operations and to enhance the site, a new cement masonry building will be installed. Grant funding from the California Department of Water Resources has been obtained for this project to help fund it. The completion of this project will increase water supply reliability for the valued customers of the FOWD.

The highlighted section on New York Avenue, just north of Lemon Street, shows the location of the Phase 2 construction area for the well site.

What to Expect

Contractors will be bringing in heavy equipment and materials onto the site and construction activity is scheduled to start sometime in early January 2026. Initial work will include installation of piping within the site to convey well water to storage or directly into the distribution system, depending on operational needs. Construction within this facility may cause unavoidable short-term inconvenience to residents in the immediate vicinity - but there will be no interruption in water service to your homes. Work will generally occur within 7am-5pm weekdays, however staff and contractors may be entering and exiting this site prior and after depending on project needs. Staff will endeavor to be respectful and mindful to the project neighbors during construction. Construction will occur on and off until completion in the spring of 2027. We appreciate your understanding as we make these improvements for the benefit of the Fair Oaks Water District customer.

We understand that construction activities are disruptive to daily routine. We will strive to minimize the inconvenience and expedite construction. Please contact us if you have any questions or concerns during this Project. We are here to help.
